Height: 24 inches

Spread: 16 inches

Spacing: 16 inches

Sunlight:

Hardiness Zone: (annual)

Other Names: Cayenne Pepper

Group/Class: Hot Cayenne

Description:

Abundant yields and versatility make this variety a must have for spice lovers; perfect for containers or gardens; produces long thin, hot fruits; emerging green and maturing to wrinkled red; ideal for sauces, pickled, dried or fresh in salsas

Edible Qualities

Long Red Slim Hot Pepper is an annual vegetable plant that is commonly grown for its edible qualities, although it does have ornamental merits as well. It produces large green long peppers (which are technically 'berries') with red flesh which are typically harvested when mature. The fruit will often fade to scarlet over time. The peppers have a hot taste and a crunchy texture.

The peppers are most often used in the following ways:

- Cooking
- Drying
- Pickling
- Seasoning
- Sauces

Planting & Growing

Long Red Slim Hot Pepper will grow to be about 24 inches tall at maturity, with a spread of 16 inches. When planted in rows, individual plants should be spaced approximately 16 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant is quite ornamental as well as edible, and is as much at home in a landscape or flower garden as it is in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.

Long Red Slim Hot Pepper is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
