Planting & Growing

Earli-Dew Honeydew will grow to be about 18 inches tall at maturity, with a spread of 6 feet. When planted in rows, individual plants should be spaced approximately 3 feet apart. This plant is typically grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America.
